

Hot Glove™

Hot Glove™ is a heat resistant double layered cotton glove with nitrile grip coating. Achieving Level 2 for contact heat, it can withstand temperatures of up to 250°C providing a high level of protection against heat. The double layer of knitted cotton also offers a degree of comfort, flexibility and dexterity not normally associated with such protection levels. The glove has good tear resistance which enhances its mechanical protection and increases durability and also features a nitrile grip pattern for safer handling. It can be worn on either hand which extends the life of the glove and is designed to have a generous fit, allowing for quick and easy removal when required. It is available in two lengths, for additional protection to the forearm.

Typically used for:

- Bakery Work • Food Manufacturing
- Oven Applications • Pressings
- Mouldings

Case Quantity:

1 pair per polybag
12 pairs per case

Size	7	9
